

Name: Peter

### **Exercise 1: Comprehension and Analysis Solution**

1. The parallelism used in the given excerpt is called "anaphora," which is the deliberate repetition of the first part of the sentence in order to achieve an artistic effect. The author, Charles Dickens, uses this technique to emphasize the contradictions inherent in the period he describes. This stylistic device also sets a rhythmic tone, preparing the reader for the juxtapositions that describe the era. By repeating "it was the" at the beginning of each clause, Dickens draws attention to the duality of the time, highlighting both positive and negative aspects simultaneously.

### **Exercise 2: Creative Writing Prompt Solution**

Dear Diary,

I woke up today feeling strange. The Sun shone, but the air felt cold. Breakfast was silent as we all saved words, them being precious and all. At work, I missed chatting. Smiles replaced sentences. On my way home, I saw a child, laughing, unaware of our word woes. That moment, bright and pure, gave me a slice of hope. Home again, I read a book from before the law passed. Old words, not counted against us, felt like freedom.

### **Exercise 3: Argumentative Essay Solution**

Artificial intelligence (AI) is transforming the world, yet the assertion that it renders the capacity to read and analyze complex texts less important is flawed. The analytical depth of human cognition is unique and cannot be solely replicated by AI; it is the fusion of both that will drive progress.

While AI excels at processing vast data, humans are needed for nuanced understanding and ethical oversight. Moreover, the human ability to understand metaphor, cultural context, and emotional subtlety goes beyond the current capabilities of AI.

Counterarguments might point to AI's increasing sophistication, but it does not negate the value of human insight. Our ability to critically evaluate information is essential to navigate the misinformation prevalent in today's digital landscape. AI can provide tools, but human analysis remains irreplaceable.

In conclusion, AI will supplement human skills but it can never replace the critical human capacity for complex textual analysis. Despite advanced algorithms, the unique human aspect of interpretation secures our role in reading and critical evaluation for the foreseeable future.
